Kapu
- Coffee scoop and bag closer

Kapu helps you to store your coffee properly in its own package. It closes coffee bag airtight so that coffee keeps its freshness and aromas protected from oxygen and the coffee scoop stays always at hand. Kapu is locally produced in Finland from Finnish birch plywood by using both modern production technology and old handicraft methods. Design Teemu Karhunen 2009.

Cleaning and care

When needed, wipe Kapu with a damp cloth and dry it immediately. Do not wash Kapu in a dishwasher. You can revive its finishing every few years by using wood treatment oil. This is all you need to do to keep Kapu nice and clean year after year, even for decades.

Materials and production

Kapu coffee scoops are made in Finland - locally. The material of Kapu, Finnish birch plywood overlaid with polypropylene coating is manufactured by Koskisen Oy in Järvelä, Southern Finland. The workpieces of Kapu are made with a CNC machine by Korvenrannan Puusepäntehtäas Oy, which is located in the same village as Koskisen Oy. The demanding, exact hand finishing is done by Hile and Puusepäntiike Björkman, which is situated in the heart of Helsinki. Naturally, only wood and finishing oils approved for contact with food are used in Kapu. The package for Kapu is manufactured by Lönnberg Painot Oy from Finnish carton.

Dimensions of Kapu

length	160 mm
width	44 mm
height	15 mm
weight	40 g
material	birch plywood
